GPU 代码片段

```
// Kernel定义
__global__ void vec_add(double *x, double *y, double *z, int n)
  int i = get_tid(); // user-defined function
  if (i < n) z[i] = x[i] + y[id];
int main()
  int N = 100000;
  int bs = 256;
  int gs = (N + bs - 1) / bs;
  // kernel调用
  vec_add<<<gs, bs>>>(x, y, z, N);
```

THANK YOU
